TCEQ Air Quality Account No. CB-0038-Q
FTIR Quarterly Report (October 2018 – December 2018)

Dear Air Section Manager:

By letter dated January 10, 1996, Formosa Plastics Corporation, Texas (FPC-TX) is required to submit written reports summarizing the FTIR data as specified by Item 5, Section (c). The enclosed quarter report includes FTIR data from the fourth quarter of 2018.

By letter dated November 25, 1997, FPC-TX was asked to submit chemical-specific polar plots of 30-minute average concentrations versus wind direction for days when a trigger level was exceeded. Enclosed are chemical-specific polar plots for those days in which an exceedance occurred. Additionally, FPC-TX was asked to submit an electronic copy of the FTIR Quarterly report. A disk containing the fourth quarter 2018 validated data for the Point Comfort and North sites is enclosed.

During the fourth quarter of 2018, there was one confirmed exceedance of the trigger levels based on [block] 30-minute averages and five confirmed exceedances of the trigger levels based on [running] 30-minute averages. An exceedance is determined by Spectrum Environmental Solutions (SES) through validation of the FTIR data.

Should you have any questions please contact Vanessa Peppers by e-mail at VanessaP@ftpc.fpcusa.com.

Sincerely,

Rick Crabtree
Vice President/General Manager

** The FTIR quarterly report format was agreed upon between TNRCC and FPC-TX upon initiation of the monitoring program. The quarterly report shows *block* averages for each 30-minute period throughout the day. The FTIR collects 5-minute data and creates *rolling* 30-minute averages. The table titled "Validated Exceedances of 30-Minute Running Averaged Trigger Levels" lists the exceedances of the 30-minute average trigger levels based on a *rolling* 30-minute average time period. The validated exceedances of the rolling 30-minute averages for the compounds listed in the table titled "Validated Exceedances of 30-Minute Running Averaged Trigger Levels" is being included in the summary table above, as required by paragraph 5, Section c of the January 10, 1996 letter from the TNRCC.

Subject: Formosa Point Comfort (FPC) Ambient Air Monitoring Station (AAMS) Gas Challenge Results for October - December 2018

Gas challenges are performed weekly against the OP-FTIR instrument with gases containing the target compounds listed in Table 1. The number of gas challenges performed was limited by instrument and gas standard availability. As such, a total of two independent gas challenges were performed for Q4 2018. Because of its corrosive nature, hydrogen chloride (HCl) was purchased in a separate cylinder and was injected in the calibration cell separate from the rest of the target compounds. The remaining target species, all being volatile organic compounds (VOCs), are contained within a single gas cylinder located at each site. Table 1 lists the challenge compounds and their expected spike concentrations. The expected spike concentrations are arrived at by multiplying the certified cylinder concentrations by the ratio of the calibration cell path length to the open path length (0.10m/314m at FPC). This is would be the molecular density (concentration by volume) if the molecules in the cell were instead evenly distributed across the entire beam path.

In Q3 2018, it was discovered that the challenge gas cylinders had developed leaks at the pressure regulator and subsequently emptied. Replacement gases and two sets of backups were ordered. The VOC mixtures were received in late December and are now operational. The HCl standards were received in January 2019 and will be installed on the next site visit by a Spectrum employee. Two gas challenges were able to be performed in Q4 2018 by transporting temporary gas standards to the site from Spectrum's facility in Austin.

Table 1. Formosa PC OP-FTIR Gas Challenge Mixtures

Compound	Compound FTIR Code	Expected Spike Level (ppm)
1,3 Butadiene	BUT	0.040
Benzene	C6H6	0.104
Ethylene	C2H4	0.040
Ethylene Oxide	ETO	0.078
Vinyl Chloride	VCl	0.040
1,2 Dichloroethane	DCA	0.084

Hydrogen Chloride	HCl	0.018
-------------------	-----	-------

A total of 2 challenges were performed during the 4th quarter of 2018. All of the gas challenges performed for the quarter resulted in acceptable recoveries with the following exception:

- HCl was not challenged during the 10/5/2018 event due to gas standard availability.

Analyte spike recovery is expressed as a percentage and calculated by taking the ratio of the actual spike value divided by the expected spike value. The actual spike is calculated by averaging the equilibrium points during a run.

October 2018

One gas challenge was conducted in October. Recoveries were generally acceptable for all compounds in October, with the aforementioned exceptions.

November 2018

No gas challenged were conducted in November.

December 2018

One gas challenge was conducted in December. Recoveries were acceptable for all compounds in December.

Conclusion

Recovery statistics for the quarter are presented in Table 2. At the bottom of the table, average recoveries for each compound (for the quarter) are given. Individual results are color-coded. **Green** highlights indicate that recovery fell within the 70% to 130% range, while results highlighted in **yellow** fell within a 50% to 150% range. Results outside of the 50% to 150% range are highlighted in **red**.
